Dr. Richard Cook submitted L2/22-279 as his proposal for the unification of the 3 essential texts of Shuowen Jiezi; 大徐本 (the text by Xu Xuan, tagged as X), 小徐本 (the text by Xu Kai, tagged as K) and 段注本 (the text by Duan Yucai, tagged as D). The mapping table is in text format, without concrete glyph images. For the experts interested in the review of the unification proposal, a glyph image chart as a supplement for L2/22-279 is available at:

<http://gyvern.ipc.hiroshima-u.ac.jp/~mpsuzuki/ShuoWen/review2023/rsc-L2-22279--20230628-all-rev2.pdf>

It is a huge PDF (305MB), including all entries of L2/22-279 mapping; this is a submission of the reduced chart covering the entries with glyph differences.

1. Outline of the Glyph Image Chart

The numbers and source tags (X, K, D) are presented in the glyph chart as in Figure 1.

The circled numbers are all same as the description in WG2 N5211's cover note, and new column ⑮ is the glyphs in N5190.

Figure 1: How the numbers and source tags (X, K, D) are presented in the glyph image chart

The circled numbers in the chart header are all the same as those in the WG2 N5211, but there are 2 differences in ⑪ and ⑮. Details are shown below.

2. The glyph index in L2/279 and the glyph chart in this document

L2/279 assigned the sequential number from 0x32400, which predicts the UCS codepoint based on the UCS roadmap. The most left cell in the chart shows this hexadecimal sequential number. However, it might be changed during future standardization works; thus, a decimal sequential number 00000..11122 is attached under the hexadecimal sequential number.

2.1. The glyph index of columns in the X group

TCA proposals use special syntax for glyph ID, which assigns sequential numbers to most entries, but assigns X001..X402 (sometimes the prefix is lowercased) to the characters added by Xu Xuan source.

The glyph index of the versions published by Jiguge (汲古閣), ⑥⑦, is different from the remaining Xu Xuan book printed in the Sung dynasty (e.g., ①) because its early print ⑥ was restructured from phonetically ordered material. The final print ⑦ had several entries imported from the Xu Kai text.

Consequently, ①②③ are the only columns whose glyph index is the same as L2/279.

2.2. The glyph index of materials in the K group

For the K group, ⑭ is the only column whose glyph index is the same as L2/279. WG2 N5211 explains the differences among ⑫⑬⑭.

3. The presentation of the glyph difference mark in L2/279

L2/279 has 2 marks to indicate the glyph difference from the X group, “+” to mean the major difference, and “-” to mean the minor difference. The difference is evaluated from the X group, therefore no marks for the X group. These marks are represented by the enclosing red lines for the marked cell, as shown in Figure 2.

The double red lines (sometimes looking like thick red lines) in Figure 2 represent the “+” marks of the major differences at column ⑪ (D+) or ⑭ (K+). The column ⑭ at row 0x32428 and column ⑪ at row 0x32450 are examples of D+ and K+ cases.

The dotted red lines in Figure 2 represent the “-” marks of the minor differences at column ⑪ (D-) or ⑭ (K-). The column ⑪ at the row 0x3243D is the example of D-.

Although there is no mark for ①~④, ⑥⑦ (in the X group), and ⑫⑬ (in the K group), the inexistence of the enclosing line does not mean “no glyph difference.” L2/279 does not give information about the glyph shapes in these

columns.

3.1. Reduced Glyph Image Chart

Most rows of the complete version of the glyph image chart have no mark of the glyph differences. The reduced version of the glyph image chart (Figure 3), excluding the rows without glyph difference marks, is attached for easy focus on the marked glyph differences.
