

ISO/IEC JTC 1/SC2/WG2/
Ideographic Rapporteur Group

Source / Contribution Identifier: Japan

Meeting: IRG#27 @ Hainan Island, China

Title: Request to Remove 78 J-Source from CJK D candidate

Keywords: (none)

Status: For your information

Short Description: Japan requests to remove J-Source characters from CJK D.

Proposed Conclusion / Requested Action: To be accepted by IRG member bodies and remove said characters from the next CJK D draft.

Arguments / Text of Contribution: See attachments.

Request to Remove 78 J-Source from CJK D candidate

Before starting to review CJK extension D candidate, Japan is studying on its characters and preparing essential attribute and font for submission to IRG. Through this work, Japan found 78 characters need more study. Reasons are:

- Japan couldn't find appropriate evidences
- Japan found some documents for evidence with differences in their shape and need more time to determine.
- Collaborating with METI's "Promotion of the standardization of character encoding and the operation of a database (汎用電子情報交換環境整備プログラム)", these characters are not in the repertoire of e-governmental service. So they have less urgent requirements.

Because of above reasons, Japan has decided to withdraw J sources of them from the CJK extension D candidate at this moment, and after questions are resolved, they will be proposed to include in the future CJK extensions.

Checking on the list that IRG Chief editor distributed on 17 Nov., all these characters with exception of C1v20=21738 have only J source. So Japan requests to remove these characters from CJK D. Because C1v20=21738 has T source, please remove only J source from this character.
