IRG N1888B: Proposal summary form from the IRG P&P
IRG N1888C: A table of the proposed characters and key attributes
IRG N1888D: A Excel spreadsheet with character attributes
IRG N1888E: UTC document L2/12-333
UTCHan.ttf: A font containing glyphs for all the characters

The table includes the following attributes:

- A. The U-source identifier
- B. The character's glyph
- C. The character's IDS (if any)
- D. The KangXi radical (number form)
- E. The KangXi radical (character form)
- F. The number of additional strokes
- G. The stroke type of the first additional stroke

- J. The code point of the variant character

The Excel spreadsheet includes the following attributes:

- A. The U-source identifier
- B. The PUA code point for the character's glyph in UTCHan.ttf
- C. The character's IDS (if any)
- D. The KangXi radical (number form)
- E. The number of additional strokes
- F. The stroke type of the first additional stroke
- G. An indication of whether the character is for traditional Chinese (TC) or simplified Chinese (SC)
- H. The code point of a character of which the proposed character is a variant. In the case of SC characters, the variant is the traditional form(s) (if encoded)
- I. The index of the character in L2/12-333 (IRG N1888E), if any

UTC document L2/12-333 (IRG N1888E) is a contribution from sinologist Andrew West. All of the characters in the UTC proposal which are *not* holdovers from Extension E derive from this document. Characters UTC-00953 onward all have indices into L2/12-333 (IRG N1888E), which itself provides the detailed evidence for those characters.

The remaining characters, which were included in our Extension E submission, have had their attributes modified to meet IRG requests.

Title: Request to UTC to Propose 226 Characters for Inclusion in CJK Extension F
Author: Andrew West
Date: 2012-10-19

The IRG does not normally accept contributions from individuals, and so there is no direct way for an individual expert to propose Han ideographs for encoding in the UCS. Over several years I have compiled a list of several hundred unencoded CJK characters, of which 226 reliably-sourced characters are urgently required for use by myself or by other users but are not scheduled for inclusion in CJK Extension E. I am therefore requesting that the UTC propose these 226 characters for inclusion in CJK Extension F via the IRG.

The 226 proposed characters fall into six categories, as discussed below.

1. Second Stage Simplifications

"Proposal to Encode Obsolete Simplified Chinese Characters" (L2/09-260R, WG2 N3695) proposes to encode 335 simplified Chinese characters that have been used historically, but that are no longer in common use. Of these, the simplified characters given in Table 1 of the *Plan for 2nd Stage Simplified Characters* that was published on 20th December 1977 were widely used in print during 1978. For example, the Table 1 simplified forms were used in the *People's Daily* newspaper from 21st December 1977 until July 1978 (see L2/09-260R fig. 4), and on postage stamps issued between June and November 1978 (see L2/09-260R figs. 6-10). Although the 2nd stage simplifications were officially withdrawn in 1978, the characters continued to see occasional use in printed contexts during the 1980s, and are still widely recognised today. There is a pressing need to encode the Table 1 simplifications, both in order to discuss the history of Chinese character simplification, and also in order to accurately represent those texts that were written using second stage simplifications (see L2/09-260R page 24 for an example of a web page for post card collectors that struggles to represent a Table 1 simplified character on a postcard from 1986).

On the other hand, Table 2 of the *Plan for 2nd Stage Simplified Characters* from 1977 was not implemented, and the Table 2 simplifications were only very rarely used in print outside the publication of the table itself. Therefore there is not as strong a case for encoding the Table 2 simplified characters as there is for the Table 1 simplified characters, and it is not proposed that they be added to CJK-F. The "first batch" simplified Chinese characters from 1935 and Singapore simplifications from 1969 that are discussed in L2/09-260R are also not proposed for adding to CJK-F.

Therefore 105 of the 335 characters proposed in L2/09-260R, all from Table 1 of the *Plan for 2nd Stage Simplified Characters* of 1977, are requested to be proposed for addition to CJK Extension F.

2. Xiandai Hanyu Cidian Additions

The *Modern Chinese Dictionary* (*Xiàndài Hànyǔ Cídiǎn* 现代汉语词典) is an authoritative dictionary of modern standard Chinese that was first published in 1973 and is currently in its 6th edition. The

2nd edition of this dictionary, published in 1983, is the source for the kXHC1983 field in the Unihan database, but as 172 characters in this edition of the dictionary are as yet unencoded, unencoded simplified characters are mapped to the corresponding traditional form characters, which makes the kXHC1983 field defective. 91 of the unencoded characters are scheduled for encoding in CJK Extension E, but that still leaves 81 unencoded characters. Given the importance of this dictionary of modern Chinese these 81 characters should be encoded as soon as possible.

3. *Grammata Serica Recensa* Additions

Bernhard Karlgren's 1957 dictionary of Old Chinese, *Grammata Serica Recensa*, is an extremely influential work in the history of Chinese philology, and the source for the kGSR field in the Unihan database. 16 entries in *GSR* are for unencoded characters, which are strong candidates for encoding.

4. Element Characters

The periodic table lacks simplified forms of 8 elements (Rf, Db, Sg, Bh, Hs, Mt, Rg and Cn), which are represented on the Chinese Wikipedia as either PUA characters (<http://zh.wikipedia.org/wiki/%E5%85%83%E7%B4%A0%E5%91%A8%E6%9C%9F%E8%A1%A8>) or as components (<http://zh.wikipedia.org/wiki/%E6%89%A9%E5%B1%95%E5%85%83%E7%B4%A0%E5%91%A8%E6%9C%9F%E8%A1%A8>), both of which methods are highly unsatisfactory. Six of these are scheduled for CJK-E, but Mt and Cn are not, and should be candidates for urgent encoding.

5. Sanskrit and Tangut Use Characters

Eleven characters used for the transliteration of Sanskrit and Tangut in recent academic publications are urgently required for encoding (see figs. 1-7).

6. Other Characters

Eleven other characters are required for encoding: three fish characters (see figs. 8-9), six plant characters (see figs. 10-15), one character used in a catalogue of Chinese books, and one character used for a technical term in a Yuan dynasty treatise on the game of golf (see fig.16).
