1. Review of CJK_F

China gave comments and responses of some G related comments on CJK_F1v2.0.

2. Further process of 3 UNCs

The 3 UNCs from *General Purpose Normalized Hanzi List* (通用规范汉字表) was proposed to WG2#62 and was accepted in principle. China requests IRG to further process them as required by WG2. See IRGN1988.

3. More place names used characters may be proposed for future extension.

There are more place names used characters are found not encoded in UCS. For example, the simplified form of “藺” (山东省威海市藺山镇). China is collecting these characters and studying processing method of them. These characters may be proposed to IRG in future.
