

Universal Multiple - Octet Coded Character Set UCS

ISO/IEC JTC1/SC2/WG2/IRGN2777

Date: 2025-03-07

Source:	TCA
Title:	Clarification Regarding the T-Glyph Issue of U+2B7C2
Meeting:	IRG #64, Online meeting
Status:	Member's Submission and Ideographic Experts
Actions required:	To be submitted to IRG and WG2
Distribution:	IRG
Medium:	Electronic
Page:	2
Appendix:	

1. Background

Selena received an email from Ken, asking for confirmation on which form (糸 or 纒) should be used for the left half of the T Glyph for U+2B7C2.

➤ Unicode 16.0 Code Chart: 2B7C2
糸 120.12 縲
TB-7329 New form: 縲

2. Investigation Results

After checking, U+2B7C2 was originally submitted for encoding in the IRGN1305 proposal. The submission included documentary evidence provided by MOE. The current representative glyph in the code chart is consistent with the documentary evidence submitted at that time.

In Taiwan, the system font provided by Windows (新細明體 ExtB) is 縲.

Note- Evidence in IRGN1305 by MOE.

IRG N1305 attachment

No.7

Selena please askd BSMI to formally issue a letter to the MOE to confirm which form is correct. In response, the MOE stated that both "縲" and "𦉰 糸寒" have documentary evidence and both need to be retained.

Note- The new evidence provided by MOE.

縲

𦉰 hân

一、稍微繫住，不綁緊。例：帽仔的帶小縲咧就好，莫縛傷紐。Bō-á ê tuà sió hân--leh tō hó, mài pák siunn ân.（帽子的繫帶只要稍微綁著，不必繫緊。）

3. TCA's Proposed Handling Approach

- (1) For CNS 11643: Both glyph forms will be retained, and "𦉰 糸寒" will be added.
- (2) For ISO/IEC 10646 (Unicode): Due to the UCV Rule, only one glyph will be encoded for these two glyphs, and the other glyph, TCA recommends handling it through IVS.
