Author:	Tao Yang (陶扬, CESI), Eiso Chan (陈永聪, Culture and Art Publishing House)
Title:	G7-Source references updates
Meeting:	IRG #65, Guangzhou, PRC
Status:	Member’s submission
Actions required:	To be considered by IRG and WG2
Distribution:	IRG
Medium:	Electronic
Page:	8
Appendix:	2

This document will resolve the issues on 163 characters. (162 for G7, 1 for GU.)
In [IRG N2788](#), Judith Chen mentioned several G-Source issues. G7-Source issues are included in that document. This G-Source was introduced in the earliest repertoire for encoding, and it had been included in URO and extended vertically in Ext. A. The following picture shows the description of G7-Source in ISO/IEC DIS 10646-1.2:1992 *Basic Multilingual Plane I-Zone Unified CJK Ideographic Character Repertoire & Ordering V2.0* printed on April 25, 1992. The earliest description is *General-Purpose Hanzi List for Modern Chinese Language* (aka 《现代汉语通用字表》). “Number of characters” column in the following picture shows “41+1” (5/6), that means 41 characters were cited from the original list, but 1 character was the urgent needed addition at that time.

C	G7	General-Purpose Hanzi List for Modern Chinese Language	GB 5007 Style Emulation	41+1	Not included in G0, 1, 3, 5, 8.
---	----	--	----------------------------	------	---------------------------------

We have reviewed IRG N2788 and provide the real source reference of G7-Source here. *General Purpose Hanzi List for Modern Chinese Language* (《现代汉语通用字表》) was announced in the year of 1988, and the publishing version was published in 1989. There are 6 appendixes in this version, and the last two appendixes are related to the Hanzi encoding, one (the penultimate appendix) is for the characters included in GB/T 2312—1980 (they only included 6,721, and 19 was moved to the other one, and 23 had not been included in both), and the other one (the last appendix) is for the characters basically not included in GB/T 2312—1980. There is no ordering in the original table, but there are the clear serial numbers for each character in the last appendix, which is suitable to be used for the real G7-Source reference values, and those 41 characters are all listed in the last appendix. Therefore, the description of G7-Source should be updated below.

G7	《信息交换用汉字编码字符集·基本集外汉字数据统计表》 (<i>Data Statistics Table of Hanzi not included in GB/T 2312—1980</i>) // 国家语言文字工作委员会 汉字处 (Hanzi Division of State Language Commission of PRC): 《现代汉语通用字表》 (<i>General Purpose Hanzi List for Modern Chinese Language</i>), 北京: 语文出版社 (Beijing: Language and Culture Press), 1989.9, ISBN 7-80006-167-1/H • 45, pp. 359-444
----	--

In this data statistics table related to G7-Source, there are 2,218 serial numbers, but there are also 4 questionable cells (the glyphs are incomplete) of them, so there are 2,214 characters in the list explicitly. This list is the supplement of GB/T 2312 (2214-19=2195), and we converted it to the 94×94 encoding forms through Row 16 to Row 39 (see Appendix A here).

Currently, there are 162 characters with G7-Source in URO and Ext. A (42+120=162). After checking, 77 characters of them are included in the list, that means the G7-Source references for these 77 characters should be maintained but the specific values should be updated, which the syntax of G7-Source should be kept as well.

Block/ Crt. Src.	Numbers of current G7 characters	Numbers of maintained G7 characters	Percentage
URO	42	41	91.62%
Ext. A	120	36	30%
G7-21 _{xx}	42	41	91.62%
G7-22 _{xx}	45	33	73.33%
G7-23 _{xx}	75	3	4.00%

We also provide the new source reference values for the remaining 86 characters (162-77=85) for other 13 G-source references.

Source	Numbers	Percentage	Numbers in URO	Numbers in Ext. A
G5	3	3.53%	0	3
G4K	2	2.35%	0	2
GCA	3	3.53%	0	3
GCESI	6	7.06%	0	6
GDM	2	2.35%	0	2
GGFZ	2	2.35%	1	1
GHZ	4	4.71%	0	4
GHZR	19	22.35%	0	19
GKX	16	18.82%	0	16
GXM	6	7.06%	0	6
GZ	2	2.35%	0	2
GZH	17	20%	0	17
GU	3	3.53%	0	3

On the other hand, we have updated G-Source reference values for 1,685 characters in [IRG N2689](#). After accepting this document in UCS/Unicode, there is still only one GU-Source character in URO (U+8780 𪛗). In fact, U+8780 𪛗 is included in the real G7-Source list, we also request to update it here.

The following table shows 163 characters with current G7-Source references, 1 GU-source character and the corresponding new updated source references values. (162+1=163)

Others

China NB has submitted [IRG N2803R](#) and [N2807](#) to resolve other issues mentioned in IRG N2788. Judith Chen also submitted [IRG N2803](#) on other issues.

Future works

After checking the newest UCS/Unicode and IRG N2689, [N2729R3](#), there are 2,151 characters with different G-Source references, which included 41 G-Sources. On the other hand, there is no need to use source reference for U+3007 ○, and 2 characters has been included in WS2021/Ext. J (1 without G-source reference & 2 with G-source references), 3 characters have been included in WS2024 with G-Source references. Therefore, there are 32 encoded characters without G-Source references, which will be considered to do the horizontal extensions in future. (32+1=33) And, there are 25 unencoded characters in the list.

Appendixes

There are two appendixes in this document.

<i>Appendix A</i>	G7 code chart
<i>Appendix B</i>	Data for the new updated G-source references

(End of Document)

Appendix A: G7 code chart

This appendix shows Row 16 through Row 39 for the *Data Statistics Table of Hanzi not included in GB/T 2312—1980* as the real G7-source.

Note: 38-50, 38-51, 38-54 and 38-87 are blank.
