0. Brief introduction

In current code charts of UCS and Unicode, we have one source related to Singapore, which is GS-Source. UAX #38 shows the information as below.

GS	Singapore Characters
----	----------------------

However, Singapore has no longer participated in the IRG encoding works. The question what we need to face is how to handle the GS-Source characters when the experts point out the issues. Jaemin Chung once submitted [IRG N2545](#) on the issue of U+48B4 𐄢. He pointed out that the GS-2151 glyph for U+48B4 should be updated like other source glyph at that time, and the final result is that we updated the GS-Source glyph but kept the source reference. At the end of the document, Jaemin raised more issues, that means maybe we will meet more situations like U+48B4 𐄢 in future, and China can't handle them.

On the other hand, Singapore and Malaysia once submitted more characters to IRG, and most of these characters have been encoded, which are submitted by other submitters with other source references. We cannot help Singapore and Malaysia do the horizontal extensions, so I think it is better to have a place to record the information.

Based on the above explanation, I suggest separating, renaming GS-Source as SG-Source and creating one new UTN named as *Ideographs used in Singapore and Malaysia*. After creating the new UTN, we can add more characters which have been used in Singapore and Malaysia to it, such as [WS2024-03518](#). The new UTN will be also helpful for the font developments and web services mainly targeting to Singapore and Malaysia.

1. Step

I list the steps in this plan below.

Step 1:

For the code charts:

(1) Request IRG and WG2 to create SG-Source (`kIRG_SGSource`) which is separate from current G-Source (`kIRG_Source`). The description is kept as Singapore characters.

SG	Singapore Characters
----	----------------------

(2) Change the source references of all the current GS-Source characters to SG-Source references. All the GS prefixes should be updated to SG prefixes and the values should be kept. We also encourage China to do the horizontal extensions for all SG-Source characters. There is only one character we need to mention is U+48B4 𐄢. It is better to keep the original GS-2151 glyph as the new SG-2151 glyph and move it to U+9097 𐄣. The G-Source refence for U+48B4 𐄢 could be GKX-1268.18.

For the new UTN:

(3) List the encoding history of all updated SG-Source characters and the encoding activities of Singapore and Malaysia in IRG.

(4) Create a table (Table SG) to include all the SG-, S0, RW-Sources characters and the basic characters collected from the current Singapore curriculum standards with the corresponding information (code point, glyph, submitted source reference, RS, collected source and status), which the order is sorted by RS.

(5) Create a table (Table MY) to include all the Malaysia-submitted characters and the basic characters collected from the current Malaysian curriculum standards with the corresponding information (code point, glyph, submitted source reference, RS, collected source and status), which the order is sorted by RS.

Step II:

For the new UTN:

(1) Expand Table SG to include the characters collected from the textbooks and the official materials with the corresponding information.

(2) Expand Table MY to include the characters collected from the textbooks and the official materials with the corresponding information.

Step III:

For the new UTN:

(1) Expand Table SG to include the historical characters, glyphs and the non-Pinyin transcribed Latin forms.

(2) Expand Table MY to include the non-Pinyin transcribed Latin forms.

Step IV:

For the new UTN:

(1) Expand Table SG to include the characters collected from other resources.

(2) Expand Table MY to include the characters collected from other resources.

Step V:

For the new UTN:

(1) Provide a plain-text file to merge the ideographs used in Singapore and Malaysia with the tags (SG and MY).

2. Proposed update

This part lists the removals, one change and additions for UniHan DB and one glyph issue for the code charts.

(2) Change

There is only one case. The source reference is based on current kIRGKangXi property value for the character. If China wants to use other new source reference, it will be OK.

1. Brief introduction and encoding history

Based on the official materials, there are [4.2 million \(76.2%, 2015\)](#) in Singapore and [6.9 million \(23.2%, 2022\)](#) in Malaysia as the Chinese ethnic group (华人). Chinese is one common and general kind of language in Singapore and Malaysia. In Singapore and Malaysia, Chinese (language) is called as “华语” or “华文”, which is different from the names in China, but it is similar to other countries and regions in Southeast Asia.

In Singapore, there are three kinds of courses related to Chinese in primary schools, the first one is primary Chinese (小学华文), the second one is primary higher Chinese (小学高级华文), and the third one is primary basic Chinese (小学基础华文). The curriculum standards provide the lists to read and write (识读字, 识写字) for primary Chinese and primary higher Chinese courses.

In Malaysia, there are several kinds of primary schools. In common primary schools (国民小学), the related course is called as “华语” (*Bahasa Cina Sekolah Kebangsaan*); in Chinese primary schools (国民性华文小学), the related course is called as “华文” (*Bahasa Cina*). The curriculum standards provide the lists to read and write (生字, 习写字) for both two courses. The curriculum standards also provide the list for one course named “交际华语” (*Bahasa Cina Komunikasi*) in middle schools, which is totally the same as the list for common primary schools.

Singapore experts participated in the IRG encoding works during the CJK Ext. A submission, and 226 characters had been encoded finally. According to IRG materials, Singapore held IRG #8 meeting in 1997 and IRG #14 meeting in 1999. Singapore experts also attended IRG #19 meeting (Macao, China) and IRG #20 meeting (Hanoi, Vietnam) both in 2002. The IRG recommendations showed Singapore activities since IRG #5 meeting (Seoul, ROK) at least. Malaysian experts attended IRG #30 meeting (Busan, ROK) and IRG #31 meeting (Kunming, China) both in 2008.

After CJK Ext. B encoding, Singapore once submitted IRG N725 which included 25 characters to IRG CJK-C1 project in 2002, and they said they would submit 74 characters totally, but now we don't know the remaining 49 characters. However, there were not any Singapore source characters in the later CJK Ext. C block. Malaysia submitted IRG N1418 which included 13 characters in 2008. Two of them were selected for the CJK-D project in IRG N1485 in 2008, and they had been included in CJK-D v5.0 (IRG N1549) with updated source references as ML-Source at that time. However, there were not any Malaysian source characters in the later CJK Ext. E block.

In this UTN, there are two tables, one is for Singapore, one is for Malaysia. Both of them include the information for UCS (code point), glyph, submitted source reference, RS, collected source and status. In the tables, the light blue background color ([#CAEDFB](#)) means the characters will be included in the coming versions of UCS/Unicode soon; the light green background color ([#C1F0C7](#)) means the characters are under reviewing of the latest IRG WS; the yellow background color ([#FFFF00](#)) means the characters have not been submitted by any sources.

2. Table SG

This table collected the characters which are needed in Singapore from different sources, and the descriptions of the sources are shown below.

UCS	ISO/IEC 10646:2020 (Edition 6)
SG0	《小学华文课程标准 2015》 / 2015 Syllabus Chinese Language Primary and 《欢乐伙伴》 ([1]-[3])
SG1	IRG N725

The detailed information on Table SG (2,066 characters) is shown below. Note that there are no the corresponding submitted source references for the basic characters used in the textbooks.

3. Table MY

This table collected the characters which are needed in Malaysia from different sources, and the descriptions of the

sources are shown below.

MY0	Primary School Curriculum Standards and Secondary School Curriculum Standards in Malaysia ([4]-[7])
MY1	IRG N1418

The detailed information on Table MY (2,573 characters) is shown below. Note that there are no the corresponding submitted source references for the basic characters used in the textbooks.
