| **Doc Type:** | **Working Group Document** |
| **Title:** | **Request to revise the glyph for T-source ideographs** |
| **Source:** | **Lin Anning** |
| **Status:** | **Individual Contribution** |
| **Action:** | **For TCA** |
| **Date:** | **2026-11-2** |

## 1. Introduction

The U+31D74  was submitted to Working Set 2017, but I found that its glyph does not match the original evidence submitted.

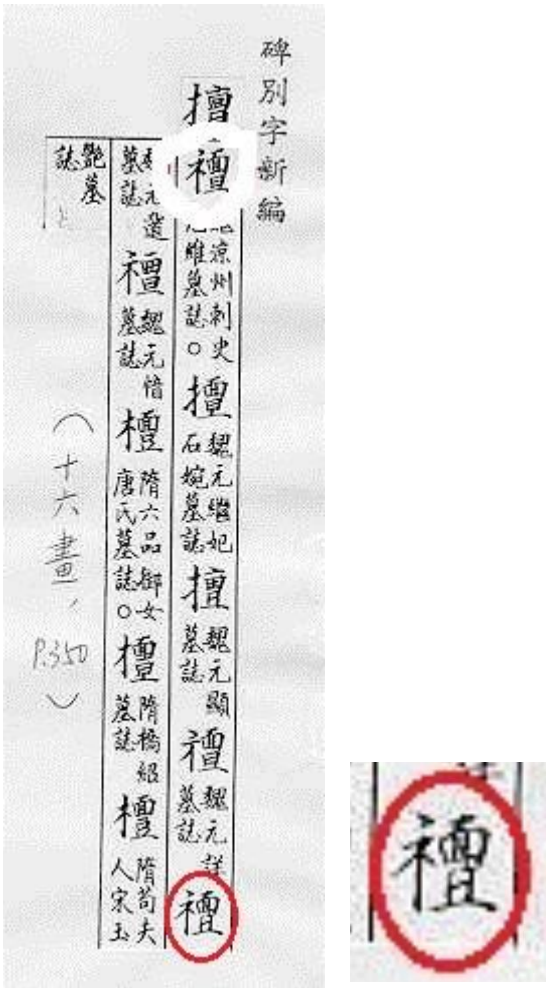

Fig.1 碑別字新編 https://hc.jsecs.org/irg/ws2017/app/?id=03115

The comment # 6421 on the Working Set 2017 also mentioned this issue. According to the original evidence, U+31D74 should be composed of ⿰礻⿱面且 instead of ⿰礻⿱面⿱口亡.
Similarly, I also found other evidence from the *Dictionary of Chinese Variants of the Ministry of Education* (教育部異體字字典).

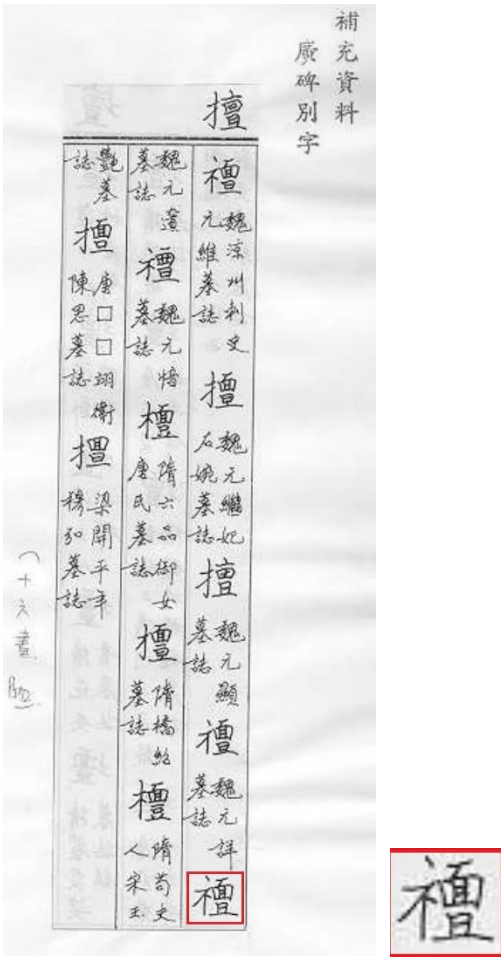

Fig.2 廣碑別字 https://dict.variants.moe.edu.tw/dictView.jsp?ID=18060

Both pieces of evidence indicate that the character originates from 魏元□辶□九首墓誌, and these evidence all indicate that it is composed of □礻□面且.

Fig.3 魏元□辶□九首墓誌

About U+28DB3 𨮳, Dr. Ken Lunde checked the history, and found that this T-source representative glyph issue was introduced in Unicode Version 6.0 (2010).

In addition, I found the glyph for Unicode Version 5.2 (2009).

I think it may have been caused by small issue while updating the T-source glyph. Given that this issue has existed for 16 years, I hope TCA could update the glyph. By the way, there seems to be a small issue with the glyph on the CNS website as well.

**2. Reference glyph and metadata**

| Code Point | Current | Suggested |
|---|---|---|
| U+31D74 |  |  |
| U+28DB3 |  |  |

For U+31D74, if TCA decides to update the T-source representative glyph, the following metadata needs to be updated:
kRSUnicode: 113.15 → 113.13
kTotalStrokes: 20 → 18

**3. Other**

Thanks to Dr. Ken Lunde and Selena for their valuable suggestions.
The URL of the T-source data points are
https://www.cns11643.gov.tw/wordView.jsp?ID=1260068 (U+31D74/T13-3A24)
https://www.cns11643.gov.tw/wordView.jsp?ID=287858 (U+28DB3/T4-6472)
By the way, the 𠙵辶𠂤九首 has not been encoded.
