

Unicode Technical Note #43

Unihan Database Property “kStrange”

Ken Lunde 小林劍

Version 4

2025-09-09

The **kStrange** property—a provisional Unihan Database property introduced in Unicode Version 14.0—is intended to collect and categorize CJK Unified Ideographs (aka *Han ideographs*) that can be considered “strange” or non-prototypical in one or more ways. This Unicode Technical Note serves to document the *kStrange* property.

Below is a summary listing of this property’s 12 categories, their single-letter abbreviations, and their names:

- Category A **[A]**symmetric
- Category B **[B]**opomofo
- Category C **[C]**ursive
- Category H **[H]**angul Component
- Category I **[I]**ncomplete
- Category K **[K]**atakana Component
- Category M **[M]**irrored
- Category O **[O]**dd Component
- Category R **[R]**otated
- Category S **[S]**troke-heavy
- Category U **[U]**nusual Arrangement/Structure
- Category Y S**[Y]**mmetric

Included in the sections for each *kStrange* category that follow are tables, and the “Code Point” and “Ideograph” cells of Han ideographs that are assigned to multiple categories are **cyan**-filled. The first instance of a Han ideograph in a CJK Unified Ideograph block is marked in **red** in the “Block” column. As of Unicode Version 17.0, a total of 803 unique Han ideographs are assigned this property, and the maximum number of categories to which a Han ideograph is assigned is two.

This Unicode Technical Note is expected to be updated as additional Han ideographs are assigned this property, which will typically happen 1) through sheer discovery; 2) by establishing new *kStrange* categories; or 3) by the encoding of new CJK Unified Ideographs.

Data Files

The following data files provide a glimpse of future changes and additions to the *kStrange* property:

- [kstrange-data-ws2024.txt](#) — serial numbers, source references, and tentative property values for candidates in [IRG Working Set 2024](#)
- [kstrange-data-uax45.txt](#) — U-Source references and tentative property values for candidates in [UAX #45](#) (*U-Source Ideographs*) that are neither encoded nor currently in the pipeline to be encoded

Representative Glyphs & Code Chart Excerpts

Most of the representative glyphs in the “Ideograph” and “Reference” (if present) columns, along with those in the “Bopomofo,” “Hangul,” and “Katakana” columns for Categories B, H, and K, respectively, are from the [BabelStone Han](#), [Hanazono Mincho](#) (花園明朝), or [Nom Na Tong](#) fonts. With very few exceptions, the code chart excerpts are based on those for [Unicode Version 13.0](#) (URO and Extensions A through G), [Unicode Version 15.0](#) (Extension H), [Unicode Version 15.1](#) (Extension I), or [Unicode Version 17.0](#) (Extension J).

Category A—[A]symmetric

Han ideographs with this property value exhibit a structure that appears to be asymmetric, and are tagged with the letter “A.”

Category	Block	Code Point	Ideograph	Code Chart Excerpt

Category B—[B]opomofo

Han ideographs with this property value visually resemble a bopomofo character. Note that common Han ideographs that resemble a bopomofo character, such as 乚 (U+4E00) versus 乚 (U+3127), have been explicitly excluded from this property. In addition to being tagged with the letter “B,” the code point for the corresponding bopomofo character is also specified.

Category I—[I]ncomplete

Han ideographs with this property value appear to be incomplete versions of an existing or possible Han ideograph (meaning that one or more components appear to be incomplete), without regard to semantics. In addition to being tagged with the letter “I,” the code points for the corresponding complete Han ideographs, if any and as shown in the “Reference” column, are also specified.

kStrange property value for U+2298F 𠄎 consists of “l” following by 50 colon-separated code points.

Category K—[K]atakana Component

Han ideographs with this property value include one or more components that visually resemble a katakana syllable. Note that although 𠄎, the PRC simplified form of 𠄎, is included, Han ideographs that include it as a component have been explicitly excluded. In addition to being tagged with the letter “K,” the code points for the katakana or katakana-like components are also specified.

Category U—[U]nusual Arrangement/Structure

Han ideographs with this property value have an unusual structure or component arrangement, and are tagged with the letter “U.” This includes clusters of four or more identical elements, along with three identical elements in a row arranged horizontally or vertically. Note that while 𠄎/𠄎/𠄎/𠄎/𠄎/𠄎/𠄎/𠄎 as stand-alone Han ideographs are considered unusual, their use as components of other Han ideographs is not, and Han ideographs that include such components have therefore been explicitly excluded.

Category Y—S[Y]mmetric

Han ideographs with this property value are symmetric or include components that are symmetric, meaning that the mirrored and unmirrored components are arranged side-by-side or stacked top-and-bottom. In addition to being tagged with the letter “F,” the code point for the corresponding unreflected Han ideograph, if any and as shown in the “Reference” column, is also specified.
