Proposal.

The script called Linear B is a syllabic system that was used on the island of Crete (and parts of the nearby mainland) to write the oldest recorded variety of the Greek language. Linear B clay tablets predate Homeric Greek by some 700 years, the latest being from the mid- to late 13th century BCE. Major archaeological sites include Knossos, first uncovered in about 1900 by Sir Arthur Evans, and a major site near Pylos on the mainland. The majority of inscriptions currently known are inventories of commodities and accounting records.

The script resisted early attempts at decipherment, but it finally yielded to the efforts of Michael Ventris, an architect and amateur decipherer. Ventris' breakthrough in decipherment came after the realization that the language might be Greek, and not (as had been previously thought) a completely unknown language. Ventris formed an alliance with John Chadwick, and decipherment proceeded quickly. Ventris and Chadwick published a joint paper in 1953.

Linear B was written from left to right with no non-spacing marks or other complications. The script consists mainly of a number of phonetic signs representing the combination of a consonant and vowel. There are about 60 known phonetic signs, a few signs that seem to be mainly free variants (Chadwick's optional signs), a few unidentified signs, numerals, and a number of ideographic signs which were used mainly as counters for commodities. Some ligatures formed from combinations of syllables were apparently used as well. Chadwick gives several examples of these ligatures, the most common of which are included in this encoding.
