Title: Summary of Ad Hoc Meeting on Khitan Small Script, 28 September 2016

Attendees: Deborah Anderson, Chen Zhuang, Craig Cummings, Michael Everson, Rick McGowan, Michel Suignard, Wei Lin Mei, Ken Whistler, and Wu Yingzhe.

The following points for Khitan Small Script (based on documents WG2 N4725R, WG2 N4765, L2/16-156) were agreed to by consensus by the meeting participants:

Encoding Model

- The encoding model will be as described in section 9 of the UTC script ad hoc recommendations L2/16-156 with the use of the following two format characters instead of the single cluster and double cluster controls that had been proposed:

  1BD1E KHITAN SMALL SCRIPT HORIZONTAL JOINER
  1BD1F KHITAN SMALL SCRIPT VERTICAL JOINER

Repertoire

- The issues with 29 characters in document WG2 N4765 were resolved. Two characters were removed: 18B96 and 18C5C, and agreement was reached on the glyph for 18BD2. There were no additional issues for the other 26 characters.

Iteration Mark

- It was agreed to move and rename the iteration mark:

  18C60 KHITAN SMALL SCRIPT CHARACTER-18C60 => 18CDF KHITAN SMALL SCRIPT ITERATION MARK

Radicals

- We discussed alternate mechanisms for representing the radicals and will follow up with the proposer authors to get their feedback.
