Title: Revised draft for the encoding of an extended Egyptian Hieroglyphs repertoire

First Tranche: Human, God and Goddess

Second Tranche: Human parts, Mammals, Mammal parts

Source: Michel Suignard

Status: Individual Contribution

Distribution: UTC, WG2

Replace: N4788 (L2/17-073), N4924 (L2/17-415), N4944 (L2/18-165), N5019R (L2/18-052R)

Summary: This document contains a revised draft proposal for the encoding of an extended Egyptian Hieroglyph repertoire based on the taxonomy proposed in document [L2/16-257] and revised from [L2/17-073] with the addition of many more references. Compared to previous versions, characters identified in the Hieroglyphica which were not obvious duplicate were also added. This represents a repertoire of 3059 characters because it only proposes a subset corresponding to Human, God/Goddess glyphs, Human parts, Mammal, and Mammal parts to facilitate review.

The author intends to propose in the future additional tranches based on the same principle used in this document representing the rest of the repertoire.

Introduction

Egyptian hieroglyphs have evolved from a set slightly above 700 characters during most of the classical period (from Old Kingdom, Middle Kingdom, to New Kingdom) to a much larger repertoire in the Greco-Roman period. In that era, the number of hieroglyphic characters has exploded to a number above 7000. Typically, that larger set is known as Ptolemaic, but this is a simplistic assumption as many of these extensions have been found to be in use in the classical period as well.

The explosion in glyph diversity was also accompanied by an increase in the number of phonetic values that could be assigned to a single glyph, up to twenty or even more readings. Overall, deciphering late usage of the script has proven to be challenging.

This document does not pretend to describe in detail the various complexities of the extended Egyptian Hieroglyphs and its usage. There are many publications on that subject, the bibliographic references section has been extended in new version of this document.

A previous document: [L2/16-257] established the base for the encoding model. The taxonomy is based on the [IFAO] classification (Institut Français d'Archéologie Orientale du Caire), roughly based on the same large groups than the Gardiner classification but with a secondary level allowing finer and more manageable grouping. Thus, a database has been created with all Hieroglyphica glyphs/characters, along with added hieroglyphs through the study of references.

While some of the proposed elements could be considered 'quadrat' structures, the emphasis of the proposal is to encode 'atomic' characters, i.e. characters that cannot be easily rendered as discrete elements because it involves ink collision and complex reshaping of the components.

Depending on parallel discussion concerning documents such as [L2/16-210], and [L2/17-112R], some characters may be removed from this proposal, if consensus is reached to use an alternate mode to encode some of the proposed characters.

All Egyptian hieroglyphs already encoded in the existing Egyptian Hieroglyphs block (U+13000..U+1342F) have been entered into the database using the new taxonomy attributes.

The intent of this proposal is to set the base for the encoding of the extended set, allowing Egyptologists to communicate data in a unified encoding platform. Then each element of the extended set can be indexed in a database where additional information can be conveyed, related to the sound, semantics, sources, description, etc. In many aspects, this is like the work done for the Han ideographs where many ancillary data elements are associated with each Han characters (commonly known as the 'Unihan' database).

The author is also aware that there is a risk of encoding quasi duplicates (i.e. characters that may not carry any significant distinction from another proposed) or an already encoded character, or even ghost characters (i.e. characters for which attestation is in doubt at present or could be found not attested in the future due to research error). However, a meticulous exploration of the subject could take decades, so it seems reasonable to encode some potential superfluous characters. Through the usage of a database, researchers can always qualify set elements (that is, define legitimate characters). This is quite like the challenges and solutions used in the context of CJK Ideographs which is a growing set of more than 100,000 code points with many of the same challenges.

An additional complication of the Ptolemaic set is that it is an extinct writing system, which makes even more difficult to draw conclusion on issues of equivalences.

Taxonomy

The proposed taxonomy uses a three-level classification. The higher level is a combination of the Gardiner A-Z (and Aa) classification and the IFAO chapter classification (I to XXX in roman notation). While IFAO has a few more items, they can be easily mapped into existing Gardiner groups (for example the Gods (Chapter III) and Goddesses (Chapter IV) can be combined in the Gardiner group C (Anthropomorphic Deities). The following is the list of the first level groups and their relationship with the IFAO groups:

Gardiner groups	IFAO (translated from French)
A. Man and his occupations	I. Men and monarchs
B. Woman and her occupations	II. Women and monarchs
C. Anthropomorphic deities	III. Gods IV. Goddesses
D. Parts of the human body	V. Human body parts
E. Mammals	VI. Mammals
F. Parts of mammals	VII. Mammal body parts
G. Birds	VIII. Birds
H. Parts of birds	IX. Bird parts
I. Amphibious animals, reptiles, etc.	X. Reptiles, amphibians
K. Fishes and parts of fishes	XI. Fishes and parts of fish
L. Invertebrate and lesser animals	XII. Insects and arachnids
M. Trees and plants	XIII. Plants
N. Sky, earth, water	XIV. Sky, earth, water
O. Buildings, parts of buildings, etc.	XV. Edifices and parts of edifice
P. Ships and part of ships	XVI. Boats and parts of boat
Q. Domestic and funerary furniture	XVII. Everyday and funeral furniture
R. Temple furniture and sacred emblems	XVIII. Temple furniture
S. Crowns, dresses, staves, etc.	XIX. Crowns XX. Jewels, clothes, staves
T. Warfare, hunting, butchery	XXII. Warfare, hunting, fishery, butchery
U. Agriculture, crafts, and professions	XXI. Agriculture and shop tools
V. Rope, fiber, baskets, bags, etc.	XXIII. Ropes, baskets, bags

Gardiner groups	IFAO (translated from French)
W. Vessels of stone and earthenware	XXIV. Vases
X. Loaves and cakes	XXV. Bread loaves
Y. Writing, games, music	XXVI. Writing, games, and music
Z. Strokes, signs derived from Hieratic, geometrical figures	XXVII. Geometric shapes
AA. Unclassified	XXVIII. Ill-defined signs

Notes:

- The order of the A-Z and I to XXVIII lists is identical except for the 2 groups T-U and XXI-XXII.
- IFAO Chapter XXIX (Uncertain identity signs) and Chapter XXX (Conventional signs) are not used in the taxonomy because they have no known references in the Hieroglyphica set and are seldom used by other references.
- Many characters originally from the group 'AA.XXVIII Unclassified Ill-defined signs' have been moved to other groups when their identity could be clarified. Some members originally from the IFAO group XXIX have also been reclassified.

To facilitate the transition from the current Gardiner taxonomy, it seemed preferable to keep the same naming convention A to Z for the higher level, to eschew J, and to put the uncertain code points in the group 'AA'.

The second level uses the IFAO classification within each IFAO chapter to further enumerate the content of each of these groups.

For example, the IFAO classification for 'A: Man and his Occupations' has the following categories (translated from French):

Men and Rulers (homme et souverains)

1. Man seated or kneeling empty handed (homme assis ou agenouillé les mains vides)
2. Man standing empty handed (homme debout les mains vides)
3. Man, head down (homme, la tête en bas)
4. Man adoring or bent (homme adorant ou penché)
5. Man on the ground or in water (homme à terre ou dans l'eau)
6. Man standing, holding a staff (homme debout, tenant un bâton)
7. Man seated or kneeling, holding something (homme assis ou agenouillé, portant quelque chose)
8. Man standing, holding something (homme debout, portant quelque chose)
9. Man seated, pouring water (homme assis, versant de l'eau)
10. Man standing, pouring water (homme debout, versant de l'eau)
11. Man hiding (homme se cachant)
12. Man working (homme au travail)
13. Shepherd and porter (berger et portier)
14. Man carrying a bundle (homme portant un baluchon)
15. Man standing, composed with a hieroglyphic sign (homme debout, en composition avec un signe hiéroglyphique)
16. Man or god holding a weapon (homme tenant une arme)
17. Soldier (soldat)
18. Prisoner and enemy (prisonnier et ennemi)
19. Dancer and acrobat (danseur et acrobates)
20. Musician (musicien)
21. Man and animal (homme et animal)
22. Man in a boat (homme dans un bateau)
23. Child (enfant)
24. Dwarf (nain)
25. Noble seated on a chair (notable assis sur un siège)
26. King or god seated without crown (Roi ou dieu assis sans couronne)

27. King or god standing without crown (Roi ou dieu debout sans couronne)
28. King or god wearing the white crown (Roi portant la couronne blanche)
29. King or god wearing the red crown (Roi portant la couronne rouge)
30. King or god wearing another crown (Roi portant une autre couronne)
31. Dead person kneeling (défunt agenouillé)
32. Mummy (momie)
33. Statue (statue)

This categorization is used in the new taxonomy, with just one additional value (34. Man, varia) added to cover glyphs that are not attributable to any of the previous sub-groups. Once these members are created, they are immutable, i.e. they cannot be removed or renumbered. However, new members can be created in each of the A to Z and AA first level groups if such a need arises. Finally, the glyphs from Hieroglyphica have been mapped into each of these 2nd level sub-groups to create the 3rd level content. The format use the following syntax: ((A-IK-Z){1}|AA)-(0-9){2}-(0-9){3}. Examples are A-01-001, M-21-024, AA-08-006.

The following table shows an example for the sub-group A11 made of 9 characters: (1st column shows the new index, 2nd: representative glyph; 3rd: UCS code point (existing or draft); 4th: IFAO index. The glyphs which are shown as black silhouettes are not currently encoded. They were created using a graphic snapshot of the IFAO documentation.

Table for A11: Man Hiding (only showing IFAO source)

index	glyph	UCS	IFAO
A-11-001			15;2
A-11-002		13005	15;3
A-11-003		13547	15;4
A-11-004			15;5
A-11-005			15;6
A-11-006			15;7
A-11-007		13004	
A-11-008		13548	
A-11-009		13549	

Taxonomy applied to the Hieroglyphica set

Having defined a taxonomy, the next step was to validate it by applying it to the target set which is the Hieroglyphica set, augmented by extensions found in implemented fonts (the set is the base of document L2/16-079), and few extensions made to cover other sources.

The following index and sources were analyzed:

- Gardiner, 1977
- Hieroglyphica index
- Hieroglyphica extension
- Douros extensions (Aegyptus)
- Unikemet (as presented in existing Unicode Egyptian Hieroglyphs block)
- Dendara, Le fonds hiéroglyphique au temps de Cléopâtre, Silvie Cauville, 2001
- Catalogue de la fonte hiéroglyphique de l'imprimerie IFAO, 1983
- Christian Leitz – Einführungen und Quellentexte zur Ägyptologie
- Kurth Einführung ins Ptolemaische, 2009

- Hornung & Schenkel (2007, last modified in 2015)
- Möller extensions (as conveyed in L2/16-250)
- Richmond extensions (as conveyed in L2/16-303), see <http://www.egpz.org/docs/AnalysisOfSomeMdCCodedTexts.pdf>
- Jochen Hallof, referencing: Dendara, Les chapelles Osiriennes, Sylvie Cauville, 1997-2012
- Valeurs Phonétiques, 1988

Based on source attestation a weight index was created to denote the number of sources found. In some rare cases, where multiple sources described a character not found in an existing font, the glyph was created as an extension to the Hieroglyphica set. At this point all entries with a weight entry value of '1' or more may be proposed for encoding (if not already encoded in the existing block).

Table for A11: Man Hiding (showing all sources with at least a member for this group)

index	glyph	UCS	HG	Gard	Unik.	Cauv.	IFAO	Leitz	Kurth	H&S	JH	VP	W
A-11-001							15;2					A;923	2
A-11-002		13005	A5A	A5*	A005A	9;4	15;3	153;4	1;35	A;1851	D70	A;925	9
A-11-003		13547	A5C				15;4				D16	A;927	3
A-11-004							15;5					A;931	2
A-11-005							15;6					A;933	2
A-11-006							15;7					A;929	2
A-11-007		13004	A5	A5	A005			153;4	1;35	A;1850	D1		6
A-11-008		13548	A5B							A;1852			1
A-11-009		13549	A421									A;921	1

Legend:

- Index: category value,
- Glyph: representative glyph, if it is a black silhouette it has not been yet encoded.
- UCS: proposed or existing code points,
- HG: Hieroglyphica index,
- HGx: Hieroglyphica index extension,
- Gard: Gardiner 1957 index,
- Unikemet index,
- Cauv.: Dendara by Sylvie Cauville, index,
- IFAO: index,
- Leitz: index,
- Kurt: index,
- H&S: Hornung & Schenkel index,
- JH: Jochen Hallof reference index,
- VP: Valeurs Phonétiques index,
- W: Weight value

Note that, because IFAO was the base for the taxonomy, many indexes only referenced by IFAO or VP were kept as reserved entries. For example, the value A-11-001, A-11-004, A-11-005, and A11-11-006 corresponding to IFAO entries: 15;2, 15;5, 15;6, and 15;7 are reserved. However, no code points are allocated for those reserved entries.

Note also that 2 sources are not present in the table above because they are not used for these 9 characters:

- Möller extensions,
- Richmond extensions.

Encoding Proposal

The new taxonomy makes it much easier to insert new code points in a meaningful staged approach. While the encoding of similar characters may not be contiguous (that is already not possible because 1071 of them were encoded in the current Egyptian Hieroglyphs block), the taxonomy will make easy to identify later updates as part of the ‘same’ sub-groups.

The subset which was created using the methodology explained above is proposed as follows:

- 13440..14032: 3059 code points in a new block Egyptian Hieroglyphs Extended-A (U+13440..U+143FF) covering for now the following sections:
 - A.I. Men and monarchs
 - B.II Women and monarchs
 - C.III Gods
 - C.IV Goddesses
 - D.V Human body parts
 - E.VI Mammals
 - F.VII Mammal body parts

These 3059 code points only represent a subset of the repertoire under consideration. It was deemed preferable to present initially a smaller set to facilitate review. This is in addition to the 319 characters that were in the same categories (A to F) already encoded in the existing Egyptian Hieroglyphs block in the range U+13000-U+1313E.

Characters for which there are no representative font glyphs have no reserved code points. For example, considering the set A11 describe above, the current code chart is defined as follows:

A11. Man hiding

A-11-002 referenced as A005A

→ 13005  egyptian hieroglyph a005a

13547  EGYPTIAN HIEROGLYPH A-11-003

A-11-007 referenced as A005

→ 13004  egyptian hieroglyph a005

13548  EGYPTIAN HIEROGLYPH A-11-008

13549  EGYPTIAN HIEROGLYPH A-11-009

The code chart is not reserving code points for A-11-001, A-11-004, A-11-005, and A-11-006. This could be easily changed if preferred.

There are currently over 600 characters in the A-F categories which fall in that category. Reviewers may look at the database extract provided as an appendix to this document to possibly augment the currently proposed set by proposing additional characters (currently shown as black silhouette pictographs). Reviewers can request that specific silhouetted characters be added.

A full code chart for the proposed 3059 characters is appended to this document.

Unicode properties

UnicodeData.txt:

13440;EGYPTIAN HIEROGLYPH A-01-003;Lo;0;L;;;;N;;;;;

...

14032;EGYPTIAN HIEROGLYPH F-31-012;Lo;0;L;;;;N;;;;;

Script value: Egyptian_Hieroglyphs

All other property values are similarly derived from values assigned to existing Egyptian Hieroglyphs and therefore the information is not duplicated here.

Ideally, sorting order should be done according to the new Taxonomy order, but it is not a hard requirement.

Database

One of the essential tools of this Egyptian hieroglyphs inventory is a database containing all listed entries, encoded or not, collecting all ancillary data concerning each of these entries. It is a work in progress as new elements are added for each of these entries. Currently, these elements concern source references but could be extended to cover additional information. The reference [Database] is a PDF representation of that database for the categories proposed for encoding in this document (A to F). It is appended to this document, following the code chart.

The current format of the database is an Excel spreadsheet with the following columns:

- Taxonomy index, only used as a guide to the following rows. When present, no other columns are defined.
- Catalog number, using the taxonomy format described above;
- Representative glyph, it may be a font glyph or a picture;
- Code point (dbCode), any value below U+1342F is an actual Unicode code point (U+1342F is proposed), values above 13430 are internal to the database and are only used by the font displaying the glyph in the previous column. The intent is to eventually move these values to either the proposed encoding value or PUA values in the U+F0000-U+FFFFFF range.
- Hieroglyphica index, based on Gardiner naming scheme. These values are generally found in all derived work. The number of these indexes have augmented with successive publications of the Dendara evidences.
- Hieroglyphica extended index, these are not part of the original Hieroglyphica, and can be found in Hieroglyphica derived fonts. The author has also added values in this area to represent glyphs not available before but found in some sources. Some provisional values (noted as DExxx) used in Dendara referencing are also recent additions.
- George Douros Aegyptus font index extension; these are mostly used to represent hieroglyphs that were not in the original Gardiner set, or in case where Hieroglyphica glyphs were different from Gardiner for the same reference.
- Gardiner index based on publications from 1928 to 1953. Some indexes were collected from the 1957 Egyptian Grammar publication. All these references are already encoded in the original Egyptian Hieroglyphs block.
- Unikemet database index, based on document [L2/06-355] (same as ISO/IEC SC2/WG2 N3182) and [L2/07-097] (same as WG2 N3237).
- Dendara, Sylvie Cauville, 2001 [Cauville]. This reference uses both Hieroglyphica glyph id and IFAO index, which makes it very useful to confirm these mappings. The book references are in “page number; item number in page”.
- Catalogue de la fonte Hiéroglyphique de l’imprimerie de l’I.F.A.O., 1983 [IFAO]. This column only represents IFAO entries which are referenced by other sources, including Hieroglyphica. Given the different styles used between Hieroglyphica glyphs and symbols used in IFAO, matching the symbols has been challenging.
- Einführungen und Quellentexte zur Ägyptologie, Louise Gestermann und Christian Leitz [Leitz]. This reference uses Hieroglyphica glyphs and Id. The book references are in “page number; item number in page”.

- Einführung ins Ptolemäische, Dieter Kurth [Kurth]. This reference uses glyphs very similar to Hieroglyphica but with additions. Some of these additions were added to the repertoire. The book references are in “page number; item number in page”.
- Hornung & Schenkel (2007, last modified in 2015). The references use the 4-digit numbers found in each A-Z and AA categories in the source in the form ‘A;0100’. Sometimes, only glyphs were provided without a clear numeric reference, in those case incomplete references using ‘X’ to denote approximation. For example, the reference ‘O;06XX’ indicates an entry associated with references found in the range O;0600 to O;0699, but not having an explicit numeric value.
- Möller extensions (as conveyed in L2/16-250) <http://www.unicode.org/L2/L2016/16250-n4741-moller-egyptian.pdf>, references that could be identified in Hieroglyphica were added as referenced sources in the database. The references used for that column are the ones (slightly edited for concision) provided in annotation of the name list in L2/16-250. For example, that document proposes EGYPTIAN HIEROGLYPH A084 with annotation ‘Moeller a020bis v3’, the reference column in the database has the value ‘a20bis v3’.
- Bob Richmond extensions (as conveyed in [L2/16-303]), see <http://www.egpz.org/docs/AnalysisOfSomeMdCCodedTexts.pdf>, the references used are the ‘CODE’ values in Table 1.
- Jochen Hallof, referencing: Dendara, Les chapelles Osiriennes, Sylvie Cauville, Volumes X to XV, 1997-2012 and La porte d’Isis, 1999. The index uses the values Dn (n is the number showing the number of attestations in the documents; for example D1 indicates an hapax). The value ‘x’ indicates a Hieroglyphica glyph for which another attestation was not yet found but is likely to be eventually found. The author has found that in the progression of this work the amount of this yet unattested set has shrunk significantly, justifying encoding these glyphs.
- Valeur Phonétiques des signes Hiéroglyphiques d’Époque Gréco-Romaine (VP), Montpellier, 1988. The index uses the categories A-Z. For the current subsets, because God and Goddess use separate the same index space in VP, the goddess value has been shifted by 1000 to create unique values for the goddess entries (C;1 -> C;1001).
- The actual value associated with a VP index, multiple values are separated by ‘;’. These values are Latin transliteration of logograph, phonograph, or determinative elements without qualification. This value does not count for the weight index calculation.
- Weigh index, this value is computed by accumulating the number of references found for a given entry. Only references belonging to Gardiner, and columns on the left are counted.
- Comment column, presenting remarks on the reference, note that the ‘~~~~~’ notation indicates some imperfect matching.

The following table shows the VP values for the group A11 (other values are shown in the previous table):

Table for A11: Man Hiding (showing Valeurs Phonétique values)

index	glyph	UCS	VP values	Note
A-11-001			<i>h3p</i>	Not proposed
A-11-002		13005	<i>imn;rm</i>	Already encoded
A-11-003		13547		
A-11-004			<i>imn;nm</i>	Not proposed
A-11-005			<i>thn</i>	Not proposed
A-11-006			<i>imn;thn</i>	Not proposed

index	glyph	UCS	VP values	Note
A-11-007		13004		Already encoded
A-11-008		13539		
A-11-009		1353A		

Other columns are planned to be added to the database, such as the following:

- Description – free form description of the glyph
- Components – list of all glyph components
- Determinative – typically indicates end of word and meaning
- Logograph (or logogram) – indicates word
- Phoneme (or phonogram) – indicates one or more sound
- Variants – similar entries

A PDF transcription of that Database is provided as annex to this document.

Current issues

1. How to maintain IFAO taxonomy principle for extension? IFAO provides some principle for compound signs to determine which part of the compound sign should be used to classify the glyph:
 - Container preempts sign contained inside,
 - Signs are classed in order of reading order (difficult to maintain by this author),
 - Vertical sign preempts horizontal sign

Typically, the process has been to look at existing cases to determine an underlying logic, not always explicitly described in IFAO. Even in few cases, the IFAO classification has not been followed because it was unexpected.
2. Consistency of the classification. There are some arbitrary decisions to be made in categorizing characters. For example, there is not always a consensus in determining whether a character represents an animal, or an abstraction such as a pottery with animal design. Especially for hapax, the categorization can be arbitrary. At this stage of the proposal, re-categorization based on additional evidence is perfectly acceptable.
3. What to do with the AA categories (Unclassified signs)? As research is progressing, more and more of these characters are re-classified into other ‘classified’ categories. It would seem natural to move these characters into their latest classification. This has been done for many of them and could use some feedback from experts.

Correlation with other proposals to extend Egyptian hieroglyphs

Along with this work, other documents have been created, either proposing smaller additions to existing repertoire ([L2/16-250], authored by Michael Everson), is proposing an extension to the Egyptian Hieroglyphs by adding 146 characters to the Egyptian Hieroglyphs (one code point in the existing block, the other 145 in a new extended block). The extended set is made up of 125 characters included in the usual Gardiner index (A-Z, AA) and 21 ‘uncertain’ characters. A vast majority of the first 125 characters are already included in both the Hieroglyphica set and IFAO, and therefore part of this encoding proposal.

The same document is also advocating for the continuation of the same naming scheme used in the original Egyptian Hieroglyphs block. The IFAO catalog in its preamble shows the limitation of such a naming scheme when the set goes from 600-1000 to 7000 or 8000. Some of that rationale is repeated here in the introduction of the new taxonomy, and therefore the rejection of that naming scheme.

In a similar fashion, a document created by Bob Richmond, see [L6/16-307] proposed to add 200 code points, based on MdC and Hieroglyphica, and again using a naming scheme based on the original Gardiner list. These 200 characters have been referenced as sources in the current proposal, using their 'CODE' column value as reference value. In some cases, such as mirrored images, new glyphs were created.

Conclusion

The work presented in this document is still preliminary and some of the information is presented in a rough format. However, the base is now a spreadsheet containing all the pertinent information which can be used to extract correlation points and can be augmented easily with ancillary data to make encoding decision easier as well as facilitate search in this vast set.

Acknowledgements

The author wants to thank the following persons for their contribution to the effort: Debbie Anderson and Ken Whistler for their kind feedback to the previous drafts, Jochen Hallof and Barbara Richter for their contribution to the determination of the mapping to the existing encoded Egyptian hieroglyphs as well as the additional extensions beyond the original Hieroglyphica set. In addition, Barbara Richter and Debbie Anderson provided many documents helping the creation of this draft proposal. Important other resources were the original Egyptian Hieroglyphs proposal created by Michael Everson, new material created by Bob Richmond, as well as the Aegyptus font created by George Douros.

The proposal also benefited from discussions and ideas exchanged with many other Egyptologists during meetings held in Cambridge, UK in July 2016, and London, UK in June 2018.

This project was made possible in part by a grant from the U.S. National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at UC Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment of the Humanities.
