## Executive Summary:

This document presents a draft encoding proposal for an extended Egyptian Hieroglyphs repertoire. The previous version (N5163) showed an explanatory repertoire mechanically based on priority elements mostly determined by frequency of use and source referencing. In contrast, this new version is the result of a detailed analysis by a group of experts in Egyptology, using among other parameters, priority, but also attestation based on original material.

This document is the first iteration of a formal encoding proposal presented to the Unicode Consortium and SC2/WG2. The document still documents a new taxonomy but puts less emphasis on elements such as the work done to establish the original sources, the initial priority settings, etc. That taxonomy while used to order the set is not part of the character name.

The document includes 4,117 new characters, of which 172 characters are currently waiting for further analysis and may not be included in future versions of this proposal. Excluding these 172 characters, there are 3,424 'Core list' characters in a list of 3,945 'Full list' characters. Note that the existing 1,072 Egyptian Hieroglyphs are split into 967 Core characters and 105 other characters.

Part of this document represents a rough consensus view shared by many experts, especially in the determination of CORE and FULL repertoires. However, many parts of this document and its format were created by Michel Suignard and do not necessarily represent the opinion of the contributing editors.

## Introduction

Egyptian hieroglyphs have evolved from a set slightly above 700 characters during most of the classical period (from Old Kingdom, Middle Kingdom, to New Kingdom) to a much larger repertoire in the Greco-Roman period. In that era, the number of hieroglyphic characters expanded to over 7000 – 10,000 plus signs. Typically, that larger set is known as Ptolemaic, but this is a simplistic categorization because many of these extensions have also been found to be in use in the classical period.

This document does not describe in detail the various complexities of the extended Egyptian Hieroglyphs and its usage. There are many publications on that subject, the bibliographic references section has been extended in the recent versions of this document to cover some related documents on that subject.

The document presents a repertoire proposal for encoding in the UCS based on criteria and principles detailed below. It also covers the terminology, a new taxonomy, attached properties, code charts and a new ancillary file attached to this document. Additional details are provided in Appendices.

A second attached file is a pdf representation of the full database which is the source for this proposal. That database contains much more information, such as detailed sign description and various experts' comments on encoding discussions. The database was also the source for the ancillary data and was used to derive the data file.

## Terminology

The following terms are used in this document (inspired from TSL and JSesh documentation):

- Token – particular sign in situ, a photography, a fac-simile, a character in a font, or a hand-drawn character in a book. In practice, the token will always be a specific drawing, from a font or from a file, perhaps referring to an actual source. This could also be seen as paleographic evidence.
- Sign – (abstract) defined by its linguistic values, according to the usual substitution rules. For instance, there would be a sign for the "owl", regardless of its actual representations, or one for the scribe outfit. The sign is the most abstract representation. A sign can itself be encoded as atomic unit (single Unicode code point) or a sequence of atomic units (compound sign). All signs are expected to have a function: representing a logogram, or a phonogram (sometimes called phonemogram), or a classifier. To reflect a distinction from the glyph describing a token, the term grapheme can also be used to describe the sign.
- Logogram – sign that represents a word or a phrase of the writing system. As such it has a pronunciation. While sometimes associated with ideogram, it should differ by always having a connection to a pronunciation.
- Phonogram – sign that represents a sound of the writing system. It does not carry a semantic value. Strictly speaking, if we make a distinction between phonetics and phonology, the term phonemogram would be preferred to denote a phonology concept, but the two terms tend to be used interchangeably.
- Classifier – an affix or word that indicates the semantic class to which the previous sign(s) belong. As such it is typically mute. It may also be called determinative or simply class.

Ideally all proposed signs should have a determined function, but some still do not. Some glyphs can also represent compound signs, that is, made of atomic signs combined (overlay or in some quadrat arrangement). Most compound signs are functionally equivalent to the sequences of these signs rendered separately, while others have their own function separate from the atomic elements. For example consider:

 (phonemogram *šm'*), compared to its elements  (phonemogram *nħb*) and  (phonemogram *'*)

Based on this, most of the compound signs are not encoded separately because they should be represented by the sequence of constituent code points with the appropriate format control characters to form the appropriate rendering.

## Criteria for inclusion

Inclusion in the repertoire is done in two levels (Full List and Core List which are described below)

### FULL LIST

The criteria for being included proposed repertoire ("FULL LIST") are:

- Signs that have priority D or higher (3 or more attestations in printed or manuscript sign lists, in computer generated books (such as *Dendara X*, *Esna VII* and *Athribis*, in *Thot Sign List* [<https://thotsignlist.org>], *Ramses*

[<http://ramses.ulg.ac.be>], TLA [<https://thesaurus-linguae-aegyptiae.de/home>], Karnak text database, AKU-PAL [<https://aku-pal.uni-mainz.de>]), OR the sign has a JSesh and/or Hieroglyphica number.

- Signs that are not attested except as the base of attested compounds. (In other words, if a compound sign can be represented as a sequence of base sign + other signs, but the base itself has not been found as a separate character. In this case, the base character needs to be included in the repertoire to represent the compound sign.)
- Signs that are considered in common use by Egyptologists, as determined by Egyptologists<sup>1</sup> (i.e., signs attested in Leitz, Kurtz, Hornung & Schenkel).

Not included in the FULL LIST are compound signs that can be created as a sequence of base sign and overlay, and/or insertion, and/or mirroring, and/or rotation of a sign already in the repertoire. Also not included are signs that can be constructed with the *hwt*, the *srx*, etc. (except as noted below). (See L2/21-248)

However, a number of compound characters are atomically encoded, based on the following categories:

- Contained objects that do not exist without the container (example: new sign proposed at U+13FB7 )
- Compound signs with a rarely occurring base (example: new sign proposed at U+13FA5 )
- Containers with multiple groups inside them (example: new sign proposed at U+14028 )
- Compound signs whose meaning cannot be explained as the function of the component parts (example: U+130BF )
- Compound signs that are considered a single entity in Ancient Egyptian scripts (except ligatures in cursive scripts) (example: U+13217 )

Note that the existing Egyptian Hieroglyphs block was encoded before these criteria were established. Therefore some of the existing signs would not be encoded with these criteria. For example U+13261  would be done today using insertion and would not be included in such a Full list.

## CORE LIST

The “Core list” is a curated subset of characters from the FULL LIST. It is the recommended set for Egyptologists and should be implemented in widely used fonts. The CORE LIST represents an expert group opinion (same group as for the FULL list) based on presented evidence. This set is similar to UnihanCore2020 for CJK, which is the minimal set of required ideographs for East Asia. The list will be accessible from the Unicode website and can be modified. For a description of the selection process for the CORE LIST by the Egyptologists involved, see the “Principles” Appendix.

Characters in the CORE LIST were verified by an image (photographs and trustworthy facsimiles). Transcription (a hand-drawn sketch of a sign) alone is not considered to be verified evidence. Images from hieratic texts will be considered if the hieroglyphic nature of the sign can be easily reconstructed (cursive hieroglyphs).

The following are the exceptions to the requirement for verification:

- the sign appears in the Unicode 5.2 repertoire, while it could not be verified, it could also not be constructed in another way using an overlay or insertion mechanism.

## WAIT LIST

Some characters were considered for inclusion for either the Full or the Core list but consensus could not be achieved in time for this document. They are included in the proposed repertoire to facilitate the review but will not be

---

<sup>1</sup> Peter Dils, Jorke Grotenhuis, Svenja Glden, Mark-Jan Nederhof, Stphane Polis, Robert Richmond, Serge Rosmorduc, and Daniel Werning

included in the final repertoire unless confirmed/verified. They are especially color highlighted to facilitate the analysis. See below for further details.

#### ADDITIONS / COMMENTS

Comments on signs that are already in the FULL LIST but not yet in the CORE LIST (recommended for use by Egyptologists), should be sent to Thot Sign List ([thotsignlist@gmail.com](mailto:thotsignlist@gmail.com)) with evidence, such as a photo or facsimile of an ancient source with precise identification of the monument.

Potential new additions to the FULL LIST should be submitted to the Thot Sign List ([thotsignlist@gmail.com](mailto:thotsignlist@gmail.com)), with evidence (photo or facsimile of an ancient source with precise identification of the monument). Signs deemed eligible by Thot Sign List team will be included in a future proposal to Unicode.

## Repertoire proposal

Based on the criteria mentioned above, a large repertoire consisting of the union of JSesh and Hieroglyphica and additional sources were examined and classified as follows:

1. Signs that should be part of a CORE List.
2. Signs that should still be encoded in the FULL list but not part of the CORE repertoire, mostly based on many attestations,
3. Signs that could be considered for encoding in either list but for which a consensus was not reached in time,
4. Signs that correspond to compound signs and as such should be encoded as sequences of atomic signs,
5. Signs that should not be encoded, either per lack of attestation or being variants to others.

Only the first three categories were considered for encoding. The accompanying code charts use color coding to determine their status.

- No color highlighting represents the CORE set,
- Green color represents the additional repertoire for which a consensus was reached; combination of this additional repertoire and non-colored items corresponds to the FULL set,
- Yellow color represents additional repertoire for which there were some support,
- Pink color represents additional repertoire for which there less support.

The signs highlighted in Yellow and Pink, while having proposed code points will be removed from future iteration of this repertoire unless support is affirmed. Their presence is merely to facilitate review and to present a 'maximum' envelope. The repertoire will be compacted by removing the unneeded signs.

(It may seem counterintuitive to not highlight the CORE set but it represents the vast majority of the proposed repertoire and therefore it makes the code chart presentation better looking).

The current proposal is presented as follows:

- Range U+13460..U+143FD, for 3998 code points in a new block Egyptian Hieroglyphs Extended-A (U+13460..U+143FF) covering the sections A to W (until the sub-category W-08),
- Range U+14680..U+146F6, for 119 code points in a new block Egyptian Hieroglyphs Extension-B (U+14680..U+151FF) covering W-09 to Z and AA (note that this block may not be used once the questionable signs are removed),
- Sub-grouping using a taxonomy based on IFAO (Institut Français d'Archéologie Orientale), described in Appendix B,
- Names using the following syntax: EGYPTIAN HIEROGLYPH-xxxxx where xxxxx represents the code point value in hexadecimal notation. Note that this version includes additional annotations to the name such as PUA code and Catalog values to facilitate expert review, but these names annotations will be removed before final processing.

- Annotations showing the function of the sign [Note: This may be moved to the ancillary file in the final proposal.]
- Cross reference showing previously encoded hieroglyphs as ordered in the new taxonomy.

The following text fragment shows entries for the sub-group Dancer and acrobat:

### A19. Dancer and acrobat

- 135E6  EGYPTIAN HIEROGLYPH-135E6 F03E2 A-19-003  
 • classifier dancing (Hpg).
- 135E7  EGYPTIAN HIEROGLYPH-135E7 F03E4 A-19-005  
 • Classifier joy, jubilation (hnw)
- 135E8  EGYPTIAN HIEROGLYPH-135E8 F03E9 A-19-010  
 • Classifier dancing (ibA).  
 → 13024  egyptian hieroglyph a032
- 135E9  EGYPTIAN HIEROGLYPH-135E9 F03EB A-19-012  
 • Classifier dance (ibA).
- 135EA  EGYPTIAN HIEROGLYPH-135EA F03EC A-19-013

- 135F0  EGYPTIAN HIEROGLYPH-135F0 F03FD A-19-025  
 • Classifier dancing (xbi).
- 135F1  EGYPTIAN HIEROGLYPH-135F1 F03F8 A-19-027  
 • Classifier fear/veneration (hA-snD)
- 135F2  EGYPTIAN HIEROGLYPH-135F2 F03FA A-19-029

Note that the code charts for the existing block (U+13000..U+1342F) use the same Yellow/Green notation to show the split between core and non-core elements.

Currently the annotation in the extended block uses in its function annotation the transliteration format defined by Manual de Codage (see [Transliteration]) which is a different format than the one used in the existing Egyptian Hieroglyphic block which is Gardiner based. This should be harmonized in the future.

## Properties

The new characters being an extension of an existing block share many of the same properties values. More details are provided below.

While the current proposal uses two blocks, it is likely that the second block may not be necessary. In that eventuality, all references to the second block (14680..151FF; Egyptian Hieroglyphs Extension-B) should be removed from this section.

No entries in CaseFolding.txt, CJKRadicals.txt, CompositionExclusions.txt, DerivedNormalizationProps.txt, EmjiSources.txt, EquivalentUnifiedIdeograph.txt, HangulSyllableType.txt, Index.txt, IndicPositionalCategory.txt, IndicSyllabicCategory.txt, Jamo.txt, MathClass.txt, NamesList.html, NameAliases.txt, NamedSequences.txt, NamedSequencesProv.txt, NormalizationCorrections.txt, NormalizationTest.txt, NushuSources.txt, PropertyAliases.txt, PropertyValueAliases.txt, PropList.txt, ReadMe.txt, ScriptExtensions.txt, SpecialCasing.txt, TangutSources.txt, USourceData.txt, USourceGlyphs.pdf, USourcesRSChart.pdf.

### UnicodeData.txt

Considering the following entry:

13000;EGYPTIAN HIEROGLYPH A001;Lo;0;L;;;;N;;;;;

The new characters have the same values:

13460; EGYPTIAN HIEROGLYPH-13460;Lo;0;L;;;;N;;;;;

13461; EGYPTIAN HIEROGLYPH-13461;Lo;0;L;;;;N;;;;;

Etc...

### Blocks.txt

### DerivedCoreProperties:

New entries:

13460..143FD ; Alphabetic # Lo [3998] EGYPTIAN HIEROGLYPH-13460..EGYPTIAN HIEROGLYPH-143FD

14680..146F6 ; Alphabetic # Lo [119] EGYPTIAN HIEROGLYPH-14680..EGYPTIAN HIEROGLYPH-146F6

### EastAsianWidth.txt

### LineBreak.txt

Unlike the original Egyptian Hieroglyph block, the extension should not contain any OP or CL elements. This will have to be confirmed once the block is finalized. Therefore, the current status calls for the following new entries:

13460..143FD ;AL # Lo [3998] EGYPTIAN HIEROGLYPH-13460..EGYPTIAN HIEROGLYPH-143FD

14680..146F6 ;AL # Lo [119] EGYPTIAN HIEROGLYPH-14680..EGYPTIAN HIEROGLYPH-146F6

### NamesList.txt

As appropriate once finalized.

### Scripts.txt

New entries:

14680..146F6 ; Egyptian\_Hieroglyphs # Lo [119] EGYPTIAN HIEROGLYPH-14680..EGYPTIAN HIEROGLYPH-146F6

### StandardizedVariants.txt

The current file contains a significant number of Egyptian Hieroglyph based standardized variants representing rotated forms. While no extension is planned at this moment, additional entries may be added in the future.

### VerticalOrientation.txt

The new signs share the same 'U' value as existing signs.

### Collation

No specific treatment is planned for the extension. It should be processed in a similar way. It would be possible to tailor the collation for all Egyptian Hieroglyphs (existing and new) corresponding to the new IFAO based taxonomy, but this is not a requirement.

### New data file

In addition, a new data file will be provided defining properties associated to existing and new Egyptian Hieroglyphs. It is modeled after the Unihan database model and may be extended in the future. It currently specifies 7 properties:

1. kEH\_Cat: Catalog value based on the IFAO derived taxonomy
2. kEH\_Core: Core list (set to 'Y' for members, undefined otherwise)
3. kEH\_Desc: Description of the sign
4. kEH\_Func: Function
5. kEH\_JSesh: JSesh source source value
6. kEH\_HG: Hieroglyphica source value
7. kEH\_IFAO: IFAO source value (defined as page number and order in the page)

Following is an extract for the two initial entries (existing signs) and the first two new entries:

U+13000	kEH_Cat	A-01-001
U+13000	kEH_Core	Y
U+13000	kEH_Desc	Man, seated, right knee raised, right arm raised, left arm in front of body.
U+13000	kEH_Func	Classifier human being.

U+13001	kEH_JSesh	A2
U+13001	kEH_HG	A2
U+13001	kEH_IFAO	2,4
..		
U+13460	kEH_Cat	A-01-002
U+13460	kEH_Desc	Man, seated, right knee raised, right arm raised, left arm behind body.
U+13460	kEH_Func	Classifier human being.
U+13461	kEH_Cat	A-01-003
U+13461	kEH_Core	Y
U+13461	kEH_Desc	Man, seated, both knees raised, foot flat on the ground, right arm raised, left arm in front of the body.
U+13461	kEH_Func	Classifier human being (rmn.w).
U+13461	kEH_IFAO	1,3

The data file is appended to this document.

## Appendix A: ENCODING PRINCIPLES

(PUA codes mentioned in this appendix refers to the database indexes)

### GENERAL PRINCIPLES

1. Hieroglyphic signs almost always have a number of different shapes that provide a visual contextualization of the text in which the sign is used. They inform the ancient (and modern) reader about the intentions and the mindset of the author. As such, the shapes are culturally relevant (chronological, geographical, social, technological, botanical, biological, religious) and can also be linguistically relevant. Different shapes may even be used within a single text. Included in the Full list will be discrete differences that are clearly identifiable and that allow to differentiate one shape from another.
2. If shapes build a “continuum” or a cluster of sign variants and cannot be clearly differentiated, only a limited number of shapes will be included (e.g. a man bowing down/inclining his back will be limited to partial inclination U+13013 = A016 ) and a deep 90° bow (PUA F0099 ). “Chubby” or “slender” signs are part of this continuum and will not be differentiated.
3. Signs with a large number of repetitive elements (e.g. the waves of , the number of loops of a snake  PUA F22BA, besides , , ..., ) will be limited to few selected examples based on philologists' judgment.
4. Seemingly identical signs which refer to different realities and to different functions/words will be differentiated and included (e.g. circular signs like the pupil of the eye, the pellet of sand, the geometrical circle, the tambourine, the ring, the hole in the ground).
5. Signs that exist with and without inner detailing will be included with the inner detailing (albeit sometimes reduced to “essential” details). This inner detailing is considered a relevant part of the sign and helps in avoiding confusion (e.g. the sun disk with and without an inner circle will always get the inner circle: U+131F3 = N005 ; the Sed festival chapel  U+133B3 = W004 will always have the rhomb/diamond/lozenge at the bottom). If a shape is only attested in a source that provides only an outline of the hieroglyph, necessary detailing may be added as far as appropriate.
6. Differences only based on color (e.g. a yellow, red, green sun disk in some royal tombs from the Valley of the Kings) will not be included.
7. Not every detail is relevant (e.g. armlets and anklets on a person are usually irrelevant, whereas the type of clothing might be relevant [simple loincloth vs. loincloth with triangular protrusion; short vs. long loincloth, dress of the vizier, Ramesside courtier dress]; the number of arrows the soldier  U+1300E = A012 is holding is irrelevant, beside the variation between a single arrow or plurality of arrows). Philologists need to judge in which cases details might be relevant (e.g. a quiver in A012 might be relevant).
8. The proposed characters are not intended to reflect fine paleographic detail, e.g.  vs. . In such cases, users should instead rely on images or facsimiles.

### Additions to the Core list from the **characters currently encoded in Unicode since v5.2**

A sign from the Unicode v5.2 repertoire is added to the Core list if there is no conflict created by adding the sign, even though it might not be verified. A conflict would e.g. arise if the sign could be created as an overlay or an insertion. (An example of a conflict would be  U+13138 which should be encoded as   = U+132F4 13436 13132 in the future.)

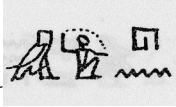

## Additions to the Core list from the extended repertoire (“Full list”)

To be added to the Core list from the Full list, a sign needs to be verified with an image. Images (photographs and trustworthy facsimiles) originate from carved, painted or written hieroglyphic texts, and cursive hieroglyphic texts. Images from hieratic texts will only be considered if the hieroglyphic nature of the sign can easily be reconstructed (cursive hieroglyphs).

An example:

shows a kneeling man with a dotted line between his hands. So far only the standing man is documented (A60  [man sowing?] or A409 ) , but the hieratic shape is sufficiently clear to build a

variant that is seated, or maybe kneeling (  ).

If verified, the sign is included in both the Core and Full list, no matter the priority, or origin. Exceptions are made for a sign that appears in verified sequences that require the addition of one of the parts of the sequence into the Core list, even though there is not yet an attestation of the sign on its own, e.g.  PUA F09A3 (GID C337) in order to compose  PUA F2BCB. (A sign within the sequence counts for the existence of the sign.)

Signs with a lot of variant forms need to be checked as a group (šzp, hr.t-nṯr etc.) by philologists/specialists. Certain variants of such signs will be excluded from the Core list based on manual review.

For the sake of standardization (for example: seated god with sun-disk and seated god with sun-disk with uraeus), an unverified sign might be required to be added to the Core list. Such an addition should be noted in the comments.

## For the Full list

To be automatically included in the Full list, the sign should have a priority D or higher (i.e., 3 or more attestations in printed or manuscript sign lists, in published computer-generated books like *Dendara X*, *Esna VII* and *Athribis*, in *Thot Sign List* [<https://thotsignlist.org>], *Ramses* [<http://ramses.ulg.ac.be> ], *TLA* [<https://thesaurus-linguae-egyptiae.de/home>], *Karnak text database*, *AKU-PAL* [<https://aku-pal.uni-mainz.de>]) and the sign has a JSesh [<https://jsesh.qenherkhopeshef.org>] and/or *Hieroglyphica* number. Verification with an actual image is not a requirement.

Manual additions to the full list can be made based on common use by Egyptologists (see Leitz, Kurth or H&S sign lists), using a manual override.

If the principles above are adhered to, any sign marked with “W” (Wait until image evidence is forthcoming or until further research is conducted) should be included in the Full list (i.e., it has priority D or higher and has a JSesh and/or Hieroglyphica number).

Transcription (e.g. a hand drawn sketch of a sign) alone is not considered to be evidence for verification for the Core list, but if the other principles are covered, the sign might still be added to the Full list.

## ADDITIONAL PRINCIPLES

Signs are not eligible for separate inclusion in the proposed repertoire if they can be constructed by a base sign and overlay and/or insertion of another sign(s), or mirroring and/or rotation of a sign already in the repertoire. For description and examples of overlay, insertion etc., please see <https://www.unicode.org/L2/L2021/21248-egyptian-controls.pdf>. This includes common variants like  U+133A2 = V031A,  U+1313B = F051B etc.

Also excluded from the full list are signs that can be constructed with the Hwt, the srx, etc..., with the exception of U+13261 010 .

Sequences are added as atomic characters when the functions of the component parts do not explain the function of a sequence. For example,  (U+131C6) *w'd* is a functionally explainable overlap, as the components correspond to *w'd* and *d*. This sign is not to be included in the Core list. On the other hand,  U+130BF, a classifier for “damage, injury” (*nkn*), is not a functionally explainable overlap, as the components correspond to *rd/leg* and *ds/knife*. So, the latter is included as an atomic character. Note that Jorke Grotenhuis applied Graeco-Roman standards to decide if the functions of the components are attested.

If a sequence can be graphically created, but there is evidence that the sign is considered a single entity in any of the Ancient Egyptian scripts (outside ligatures in cursive scripts), such as  U+13217, the sequence is added atomically.

### Missing signs

The work to include all signs that are needed and eligible is not yet finished; only those signs which adhere to the principles cited above have been included. In many cases, no evidence has yet been found for signs that have been listed or mentioned in existing sign lists (i.e., images are lacking or the quality of the images at our disposal was not sufficient to decide).

If users find a meaningful variant that is not in the list and they can provide evidence of the sign (photo or facsimile of an ancient source with precise identification of the monument), please make a submission to That Sign List ([thotsignlist@gmail.com](mailto:thotsignlist@gmail.com)), including the evidence and full bibliographic information so it can be reviewed. Eligible signs will be added to a future Unicode proposal and refer to the contributors.

Note: If a sign is not in the font, users can rely on the proposed fallback sign in the Core set, which has the same function as the missing sign, if the fallback has been added and appears in the font.

## Appendix B: IFAO based sign Taxonomy

The following sign taxonomy while preserving the overall Gardiner classification A to Z, creates sub-group within each of these groups to facilitate the search of signs. While it is not used as a naming convention for the proposed signs, it still defines their ordering within the list of signs.

This taxonomy uses a three-level classification. The higher level is a combination of the Gardiner A-Z (and Aa) classification and the IFAO chapter classification (I to XXX in roman notation). While IFAO has a few more items, they can be easily mapped into existing Gardiner groups (for example the Gods (Chapter III) and Goddesses (Chapter IV) can be combined in the Gardiner group C (Anthropomorphic Deities). The following is the list of the first level groups and their relationship with the IFAO groups:

<b>Gardiner groups</b>	<b>IFAO (translated from French)</b>
A. Man and his occupations	I. Men and monarchs
B. Woman and her occupations	II. Women and monarchs
C. Anthropomorphic deities	III. Gods IV. Goddesses
D. Parts of the human body	V. Human body parts
E. Mammals	VI. Mammals
F. Parts of mammals	VII. Mammal body parts
G. Birds	VIII. Birds
H. Parts of birds	IX. Bird parts
I. Amphibious animals, reptiles, etc.	X. Reptiles, amphibians
K. Fishes and parts of fishes	XI. Fishes and parts of fishes
L. Invertebrate and lesser animals	XII. Insects and arachnids
M. Trees and plants	XIII. Plants

Y. Writings, games, music	XXVI. Writings, games, music
Z. Strokes, signs derived from Hieratic, geometrical figures	XXVII. Geometric shapes
AA. Unclassified	XXVIII. Ill-defined signs

### Notes:

- The order of the A-Z and I to XXVIII lists is identical except for the 2 groups T-U and XXI-XXII.
- IFAO Chapter XXIX (Uncertain identity signs) and Chapter XXX (Conventional signs) are not used in the taxonomy because they have no known references in the Hieroglyphica set and are seldom used by other references.
- Many characters originally from the group 'AA.XXVIII Unclassified Ill-defined signs' have been moved to other groups when their identity could be clarified. Some members originally from the IFAO group XXIX have also been reclassified.

To facilitate the transition from the current Gardiner sign taxonomy, it seemed preferable to keep the same naming convention A to Z for the higher level, to eschew J, and to put the uncertain code points in the group 'AA'.

The second level uses the IFAO classification within each IFAO chapter to further enumerate the content of each of these groups. For example, the IFAO classification for 'A: Man and his Occupations' has the following categories (translated from French):

#### Men and Rulers (homme et souverains)

1. Man seated or kneeling empty handed (homme assis ou agenouillé les mains vides)
2. Man standing empty handed (homme debout les mains vides)
3. Man, head down (homme, la tête en bas)
4. Man adoring or bent (homme adorant ou penché)
5. Man on the ground or in water (homme à terre ou dans l'eau)
6. Man standing, holding a staff (homme debout, tenant un bâton)
7. Man seated or kneeling, holding something (homme assis ou agenouillé, portant quelque chose)
8. Man standing, holding something (homme debout, portant quelque chose)
9. Man seated, pouring water (homme assis, versant de l'eau)
10. Man standing, pouring water (homme debout, versant de l'eau)
11. Man hiding (homme se cachant)
12. Man working (homme au travail)
13. Shepherd and porter (berger et portier)
14. Man carrying a bundle (homme portant un baluchon)
15. Man standing, composed with a hieroglyphic sign (homme debout, en composition avec un signe hiéroglyphique)
16. Man or god holding a weapon (homme tenant une arme)
17. Soldier (soldat)
18. Prisoner and enemy (prisonnier et ennemi)
19. Dancer and acrobat (danseur et acrobates)
20. Musician (musicien)
21. Man and animal (homme et animal)
22. Man in a boat (homme dans un bateau)
23. Child (enfant)
24. Dwarf (nain)
25. Noble seated on a chair (notable assis sur un siège)
26. King or god seated without crown (Roi ou dieu assis sans couronne)
27. King or god standing without crown (Roi ou dieu debout sans couronne)
28. King or god wearing the white crown (Roi portant la couronne blanche)
29. King or god wearing the red crown (Roi portant la couronne rouge)
30. King or god wearing another crown (Roi portant une autre couronne)
31. Dead person kneeling (défunt agenouillé)
32. Mummy (momie)
33. Statue (statue)

This categorization is used in the new taxonomy, with just one additional value (34. Man, varia) added to cover signs that are not attributable to any of the previous sub-groups. Once these members are created, they are immutable, i.e. they cannot be removed or renumbered. However, new members can be created in each of the A to Z and AA first level groups if such a need arises. Finally, the glyphs from the various sources have been mapped into each of these 2<sup>nd</sup> level sub-groups to create the 3<sup>rd</sup> level content. The format use the following syntax: ((A-IK-Z){1}|AA)-(0-9){2}-(0-9){3}. Examples are A-01-001, M-21-024, AA-08-006.

The following table shows an example for the full sub-group A-19 shown as an example of a proposed sub-group. It is made of 30 characters: (1<sup>st</sup> column shows the PUA index, 2<sup>nd</sup>: catalog number, 3<sup>rd</sup>: representative glyph; 4<sup>th</sup>: UCS code point (for already encoded and proposed sign); 5<sup>th</sup>: Core; 6<sup>th</sup>: HG/JSesh code; 7<sup>th</sup>: IFAO index.

## Appendix C: Sign Database

The sign database is a comprehensive list of Egyptian Hieroglyphs collected from many sources for which several attributes have been collected. It includes signs that go from paleographic evidence to abstract signs. Its main index is using Private Use Area immutable values starting at U+F0000. The list currently contains approximately 11,000 elements and has been growing as new elements have been collected. To facilitate extension, room was left between each sub-group in the PUA space so that related glyphs could be added while staying close to existing 'similar' glyphs. The list is ordered using the IFAO based taxonomy, the PUA codes roughly follow the same order as it was originally conceived in that order. After rearrangement, given that PUA codes are immutable, it means that the list is no longer in PUA order.

### Sign content

A list of glyphs was created using the union of the following collections:

- Characters encoded in the Unicode Egyptian Hieroglyphs block (U+13000..U+1342F),
- Hieroglyphica elements (including addition made by Jochen Hallof reporting Dendara and Esna attestation),
- Hieroglyphica extensions based on various demands,
- JSesh elements (version 7.5.5),
- Thot Sign List elements (online),
- Thesaurus Linguae Aegyptiae (TLA) elements as determined by usage frequency,
- Pyramid Text publication of Sethe occurrences,
- Karnak sign occurrences,
- IFAO entries.

Hieroglyphica and JSesh are by far the biggest contributors to the list, sharing approximately 6,800 glyphs; this represents the largest intersection between two sources of this list. The list currently contains approximately 11,000 elements ordered by catalog values. At some point the catalog values may become fixed, but this is not an immediate goal. However, the intent is to keep them as stable as possible.

### Attestation of use

In addition to the collections used to create the list, additional references were used to determine the scope of attestation.

The following index and sources were analyzed:

- Gardiner, 1953
- Hieroglyphica index (including addition made by Jochen Hallof in reporting Dendara vol X to XIV attestation)
- Hieroglyphica extension (various sources)
- Douros extensions (Aegyptus)
- Thot Sign List (TSL) accessed online at [http://thotsignlist.org/sign\\_gen](http://thotsignlist.org/sign_gen)
- Thesaurus Linguae Aegyptiae (TLA) entries, as provided by Daniel Werning
- Pyramid Text entries, as provided by Daniel Werning
- Karnak entries, as provided by Daniel Werning
- JSesh word processor, version 7.5.5
- Unikumet (as presented in existing Unicode Egyptian Hieroglyphs block)
- Dendara, Le fonds hiéroglyphique au temps de Cléopâtre, Sylvie Cauville, 2001
- Catalogue de la fonte hiéroglyphique de l'imprimerie IFAO, 1983
- Christian Leitz – Einführungen und Quellentexte zur Ägyptologie
- Kurth Einführung ins Ptolemaische, 2009
- Hornung & Schenkel (2007, last modified in 2015)
- Möller extensions (as conveyed in L2/16-250)
- Richmond extensions (as conveyed in L2/16-303), see <https://github.com/HieroglyphsEverywhere/Docs/blob/master/Archive/AnalysisOfSomeMdCCodedTexts.pdf>

- Jochen Hallof attestation, referencing Dendara volumes X to XV, Les chapelles Osiriennes, Sylvie Cauville, 1997-2012
- Jochen Hallof attestation, referencing Le Temple d'Esna Volume 7, Serge Sauneron, 2009
- Valeurs Phonétiques, 1988, entries with at least one phonetic entry count for one attestation

NOTE: Other sources such as older publications for Dendara vol 1 to 9 could also be considered because they are referenced in Valeurs Phonétiques. The situation is similar for publications related to the Esna Temple and the Edfou Temple (see the References section, other sources) .

Based on source attestation a weight index was created to denote the number of sources found. In some cases, where multiple sources described a character were not found in an existing font, the glyph was created as an extension to the set.

## Priority setting

The next step was to use the various sources and attestation to determine an encoding priority value, based on the following criteria:

Priority value	Explanation
A	<ul style="list-style-type: none"> <li>• combined attestation equal or larger than 100</li> </ul>
B	<ul style="list-style-type: none"> <li>• combined attestation equal or larger than 10</li> </ul>
C	<ul style="list-style-type: none"> <li>• TSL entries, all corresponding to well-documented entries in the TSL database collecting description, functional analysis of a given sign</li> <li>• Combined attestation between 4 and 9</li> </ul>
D	<ul style="list-style-type: none"> <li>• Triple attestation</li> <li>• Provide at least one element for a sub-group</li> <li>• Explicit request for encoding for various other reasons</li> </ul>
E	<ul style="list-style-type: none"> <li>• Dual attestation</li> </ul>
F	<ul style="list-style-type: none"> <li>• Single attestation (hapax)</li> </ul>
(blank)	<ul style="list-style-type: none"> <li>• Other entries</li> </ul>

## Acknowledgements

The author wants to thank the following persons for their contribution to the effort: Debbie Anderson and Ken Whistler for their kind feedback to the previous drafts, Jochen Hallof and Barbara Richter for their contribution to the determination of the mapping to the existing encoded Egyptian hieroglyphs as well as the additional extensions beyond the original Hieroglyphica set. In addition, Barbara Richter and Debbie Anderson provided many documents helping the creation of this document. Important other resources were the original Egyptian Hieroglyphs proposal created by Michael Everson, new material created by Bob Richmond, as well as the Aegyptus font created by George Douros.

The proposal also benefited from discussions and ideas exchanged with many other Egyptologists during meetings held in Cambridge, UK in July 2016, London, UK in June 2018, Tournan, France in June 2019, Berlin, January 2023, and more recent discussions among the same group of experts. In particular, Daniel Werning (Humboldt-Universität zu Berlin) has contributed significantly in improving the glyphs of glyphs used for the representation of already encoded signs and providing the information concerning the Thesaurus Linguae Aegyptiae (TLA) attestation; Stéphane Polis (Université de Liège) provided mapping between Hieroglyphica/JSesh and the Thot Sign List IDs.

Finally the largest contribution to this work was done by the following group of experts, most of them experts in Egyptology, but not all. For example my personal contribution was mostly in font redraws and data management. Deborah is coordinating the effort. The main task was to extract from the large set of raw material a list of proposed candidate signs for encoding, to create description for the signs and functional context, the bulk of that work was done by Jorke Grotenhuis, with funding through a Google Research grant (awarded to Deborah Anderson, UC Berkeley).
